

Write a program that uses a class named Laptop to store the following information about a laptop:

- Manufacturer (for example Asus, Dell, hp, etc.)
- Processor (intel i3, AMD Ryzen, etc.)
- screenSize (for example 13, 14, 15.6, 17.3 inches)
- color (black, white, silver, etc.)
- isNew (true or false)

write accessors, mutators, input, and output functions, Also, include two constructors: one with no arguments and another with 5 arguments.

In your main function, define two Laptops:

Laptop a, b("Dell", "Intel i5", 15.6, "Black", true);

Then, ask the user for entering info for these laptops and display the stored info.
